Subtropical and tropical  
forest

## Top 5 Sumatran Rhino Facts

-  Sumatran rhinos are the smallest of the rhino species – they usually stand at 1.20 - 1.45 metres and are about 2.50 metres long.
-  They can live up to 40 years old!
-  They can grow to be as heavy as 1760lbs!!
-  The Sumatran rhinos are brown / dark reddish in colour and are covered in patchy coarse hair.
-  They have two horns that are much smaller than their African relatives. They front horn can be up to 31 inches but normally is much smaller. The posterior horn is usually no more than a small hump.
